

HP-312F-L4D 2.125Gbps SFP Optical Transceiver, 40km Reach

Features

- Up to 2.125Gb/s bi-directional data links
- 1310nm DFB laser and APD photodetector for 40km transmission
- Compliant with SFP MSA and SFF-8472 with duplex LC receptacle
- Digital Diagnostic Monitoring:

Internal Calibration or External Calibration

- Compatible with RoHS
- +3.3V single power supply
- Operating case temperature:

Standard: 0 to +70°C Extended: -20 to +85°C

Applications

- 2X Fiber Channel
- Switch to Switch interface
- Switched backplane applications
- Router/Server interface
- Other optical transmission systems

Description

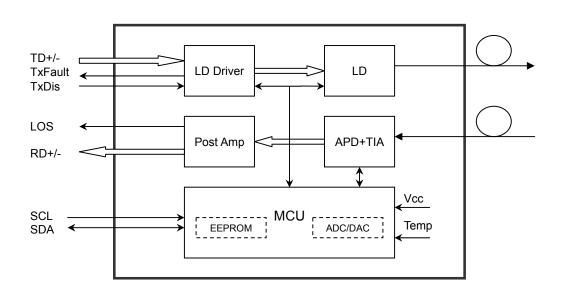

The SFP transceivers are high performance, cost effective modules supporting dual data-rate of 2.125Gbps and 40km transmission distance with SMF.

The transceiver consists of three sections: a DFB laser transmitter, a APD photodiode integrated with a trans-impedance preamplifier (TIA) and MCU control unit. All modules satisfy class I laser safety requirements.

The transceivers are compatible with SFP Multi-Source Agreement (MSA) and SFF-8472. For further information, please refer to SFP MSA.

Notes:

- 1. The optical power is launched into SMF.
- The optical power is fauticled into Sivil.
 PECL input, internally AC-coupled and terminated.
 Measured with a PRBS 2⁷-1 test pattern @2125Mbps, BER ≤1×10⁻¹².
 Internally AC-coupled.

Timing and Electrical

Table 4 - Timing and Electrical

Parameter	Symbol	Min	Typical	Max	Unit
Tx Disable Negate Time	t_on			1	ms
Tx Disable Assert Time	t_off			10	μs

Serial ID Clock Rate	f_serial_clock		400	KHz
MOD_DEF (0:2)-High	V _H	2	Vcc	V
MOD_DEF (0:2)-Low	VL		0.8	V

Diagnostics

Table 5 - Diagnostics Specification

Parameter	Range	Unit	Accuracy	Calibration	
Temperature	0 to +70	°C	±3°C	Internal / Esternal	
remperature	-20 to +85	C	13 C	Internal / External	
Voltage	3.0 to 3.6	V	±3%	Internal / External	
Bias Current	0 to 100	mA	±10%	Internal / External	
TX Power	-2 to +3	dBm	±3dB	Internal / External	
RX Power	-30 to -9	dBm	±3dB	Internal / External	

Digital Diagnostic Memory Map

The transceivers provide serial ID memory contents and diagnostic information about the present operating conditions by the 2-wire serial interface (SCL, SDA).

The diagnostic information with internal calibration or external calibration all are implemented, including received power monitoring, transmitted power monitoring, bias current monitoring, supply voltage monitoring and temperature monitoring.

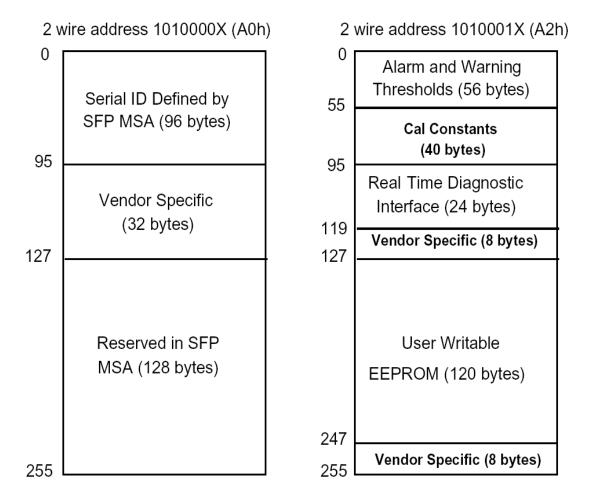

The digital diagnostic memory map specific data field defines as following.

Plug Seq.: Pin engagement sequence during hot plugging.

- 1) TX Fault is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor on the host board to a voltage between 2.0V and Vcc+0.3V. Logic 0 indicates normal operation; Logic 1 indicates a laser fault of some kind. In the low state, the output will be pulled to less than 0.8V.
- 2) TX Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7k~10kΩ resistor. Its states are:

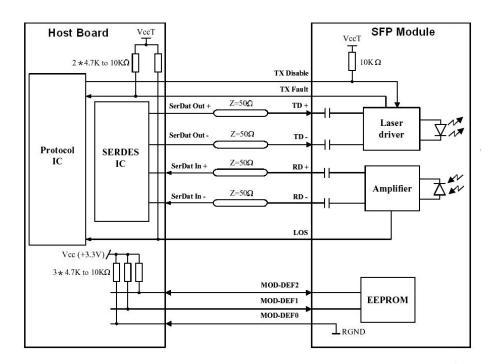

Low (0 to 0.8V): Transmitter on (>0.8V, < 2.0V): Undefined

High (2.0 to 3.465V): Transmitter Disabled Open: Transmitter Disabled

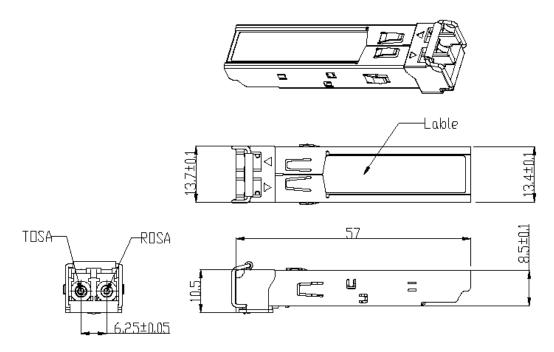

- 3) Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7k~10kΩ resistor on the host board. The pull-up voltage shall be VccT or VccR.
 - Mod-Def 0 is grounded by the module to indicate that the module is present
 - Mod-Def 1 is the clock line of two wire serial interface for serial ID
 - Mod-Def 2 is the data line of two wire serial interface for serial ID
- 4) LOS is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor. Pull up voltage between 2.0V and Vcc+0.3V. Logic 1 indicates loss of signal; Logic 0 indicates normal operation. In the low state, the output will be pulled to
- 5) RD-/+: These are the differential receiver outputs. They are internally AC-coupled 100 differential lines which should be terminated with 100Ω (differential) at the user SERDES.
- 6) TD-/+: These are the differential transmitter inputs. They are internally AC-coupled, differential lines with 100Ω differential termination inside the module.
